

The replacement of Inlet View Elementary School in Anchorage, AK, demonstrates a commitment to modern building performance and occupant protection with the integration of RevealShield IT Integrated Tape from VaproShield. Facing Alaska's severe climate and short construction season, the design team prioritized a resilient, high-performance building envelope system capable of maintaining durability under extreme conditions.

RevealShield IT was selected for its ability to effectively block air and liquid water while remaining vapor permeable—reducing the risk of moisture damage and supporting long-term energy efficiency. With integrated seam tape and the ability to remain exposed for up to 12 months, RevealShield IT helped keep the building envelope protected throughout phased construction.

Trusted by Nvision Architecture and Cornerstone General Contractors, RevealShield IT plays a critical role in safeguarding both the structure and the students inside, making it a smart and reliable choice for education projects in demanding environments.

The Specifications

VaproShield Solution	RevealShield IT
Industry Type	Institutional
Construction Type	Renovation
Architect	Nvision Architecture, Inc. www.nvisionarchitecture.com/
Contractor	Cornerstone General Contractors www.cornerstoneak.com/
VaproShield Rep	Exterior Technology Systems
